Tektronix Design for Environment Statement

Tektronix has a strong commitment to meet its environmental regulatory obligations. Our key objective is to ensure that our high standards of product quality, reliability and safety are maintained as we strive to reduce the environmental footprint of our products and processes.

To achieve this objective, Tektronix is actively engaged in a corporate wide initiative working with industry consortia to develop and define common technical qualification criteria, acceptable material alternatives, and testing and reporting standards that will allow us to transition our product designs to meet evolving regulatory obligations. We will also provide customers with end-of-life product take-back and recycling capability wherever local law requires.

Waste Electrical and Electronic Equipment (WEEE) – Product Recycling

European Union WEEE

In support of our environmental goals, effective August 2005 Tektronix launched a formal product Take-Back and Recycle Program in Europe that complies with the European Union Directive 2002/96/EC on waste electrical and electronic equipment ("WEEE Directive").

This program provides self-service instructions for product take-back and recycling. Equipment that is returned through this program will be handled in an environmentally safe manner using processes that comply with the WEEE Directive requirements. Please visit our website at <http://www.tek.com/Measurement/Service/recycle/> for more information or to submit a recycling request.

Restrictions on Hazardous Substances (RoHS) Compliance

European Union RoHS

Tektronix products are currently out of scope of the European Union RoHS Directive 2002/95/EC (see Article 2) because they are classified as Category 9 Monitoring and Control Instrumentation according to Annex I of 2002/96/EC. Though we are not currently required to eliminate the environmentally significant substances restricted under RoHS, we are actively researching and assessing the impacts to product quality, long-term reliability and product performance as it relates to the elimination of these substances. As we work toward our transition to RoHS-compliant materials, we are also working with our global supply chain partners to adopt "backwards" compatible RoHS compliant components that meet all our product performance specification and manufacturing processing requirements.

China RoHS

Tektronix products manufactured from March 1, 2007 comply with the requirements for product marking, disclosure of the content of certain hazardous substances, and packaging marking, which are associated with Phase-1 of the People's Republic of China legislation "Management Methods for Control of Pollution Caused by Electronic Information Products". This legislation is otherwise known as "China RoHS".

If you have any questions regarding the Tektronix Environmental program, including the use of restricted materials in our products, please contact the Senior Compliance Manager at +1 (503)-627-1220, or email environmental-compliance@tektronix.com
