

Customer Communication

Subject: Tektronix Communications Exits Base Station RF Test Market

Tektronix Communications has recently made the decision to make key changes to our Wireless Field Test product line that I wanted to make you aware of.

First, Tektronix Communications is exiting the base station RF test market and will no longer be selling the NetTek and the RF Scout products after December of 2008.

The SA2600 and H600 are being sold by Tektronix Instruments today. These products will be managed by that group going forward, and they will continue to sell them and develop follow-on products. We believe this move provides the best opportunity to leverage skills and technology across products and will enable continued focus on innovation and offer customers leading RF solutions.

In the transition planning, careful attention has been made to ensuring that you are aware of these changes and have our commitment to provide continued support for the products that are moving to Tektronix Instruments.

We will stop accepting orders for the NetTek and RF Scout products on December 15, 2008. Delivery may not be requested for later than December 31, 2008. We will work with you over the next few months to identify any needs you have for your current work and for spares for the future. We remain committed to supporting you with the products you have for repair and calibration services for 5 years through 2013.

If you have questions regarding the discontinued products, please visit the following Web address: **www.tektronixcommunications.com/wft**

For repair and calibration services on the discontinued products, please call 1-800-833-9200 Service Option #2.
