The AFG2021 Arbitrary Function Generator gives you the power to create the signals you need at an entry-level price. With 20 MHz bandwidth, 14-bit resolution, and 250 MS/s sample rate, you can generate all manner of signals -- from complex serial data streams to simple audio frequencies or clock signals to the output of an airbag sensor during a crash. With 12 standard waveforms, modulation capability, and a built-in noise generator, you can quickly create the signal you need to thoroughly exercise your designs.

Key performance specifications
- 20 MHz sine, 10 MHz pulse waveforms provide coverage for your most common applications
- 250 MS/s sampling rate and 14-bit vertical resolution enable the creation of high-fidelity signals

Key features
- The innovative UI reduces setup and evaluation time with direct access to frequently used functions and parameters
- The internal 4 × 128 kS memory and the USB memory expansion capability provide substantial capacity for defining complex waveforms
- USB remote control port and USB flash drive port are included. GPIB and LAN interfaces are available as an option
- Built-in Modulation, Noise Generator, Burst, and Sweep modes for greater versatility
- Built-in waveforms provide quick access to commonly used signals
- Large 3.5 inch color screen displays both graphical and numeric waveform information simultaneously
- Menu and online help in 8 languages

Applications
- Electronic test and design
- Sensor simulation
- Education and training
- Functional test
- System integration

Superior performance at an affordable price
Most electronic devices, circuits, and systems are designed to handle some form of a signal. These signals can be simple like an audio frequency or clock signal or more complex like a serial data stream or the output of an airbag sensor during a crash. With 20 MHz bandwidth, 14-bit resolution, and 250 MS/s sample rate, the AFG2021 Arbitrary Function Generator can create both simple and complex signals at an entry-level price. With 12 standard waveforms, modulation capability, and a built-in noise generator, you can quickly create the signal you need to thoroughly exercise your designs.

Intuitive user interface
The innovative ease-of-use features first seen on the AFG3000 Series arbitrary/function generators are the building blocks for the AFG2021, providing quick access to setup and operational features. Experienced AFG3000 users will find it especially easy to set up the new AFG2021. A 3.5 inch color TFT screen shows relevant parameters in both graphic and text formats, so you can have full confidence in your settings and focus on the task at hand. The front-panel shortcut buttons and rotary knob provide quick access to the most frequently used functions and settings.
Excellent frequency agility

Traditional function generators created their output signals using analog oscillators and signal conditioning. The Tektronix AFG2021 relies on Direct Digital Synthesis (DDS) techniques. DDS technology synthesizes waveforms by using a single clock frequency to generate any frequency within the instrument’s range. DDS architecture provides exceptional frequency agility, making it possible to program fast frequency and phase changes, which is useful for testing radio and satellite system components, amplifiers, and filters.

ArbExpress for real-world waveforms with minimal effort

With ArbExpress software, you can quickly create waveforms that can be copied to the AFG2021 to meet custom stimulus requirements. ArbExpress supports direct connection to Tektronix oscilloscopes and AFGs through USB, GPIB, or LAN. The software allows you to import real-world signals captured with an oscilloscope onto a PC, then edit and download them onto an AFG to duplicate the captured waveform. This is extremely useful for automotive, medical, and industrial applications where recreating sensor output is critical to analyzing the integrity of the design.

Connectivity

Using the front-panel USB host port, you can save your customized waveforms or instrument settings onto a USB memory stick. Reloading the data is easily done by plugging the device back into the USB host port. The USB device port and optional GPIB/LAN ports provide multiple alternatives for connecting the AFG2021 to your PC for waveform download and remote control.

Compact form factor

The 2U height and half-rack width form factor allow the AFG2021 to be stacked on other bench instruments, such as digital multimeters, power supplies, and frequency counters, saving valuable bench space. With the optional RMU2U rackmount kit, GPIB interface, and full SCPI support, the AFG2021 is a perfect solution for automated test systems.
## Specifications

### Model overview

### General characteristics

**Sine wave**
- 1 μHz to 20 MHz

**Sine wave in Burst Mode**
- 1 μHz to 10 MHz

**Effective maximum frequency out**
- 20 MHz

**Amplitude flatness (1 V<sub>pp</sub>)**
- <5 MHz: ±0.15 dB (±0.05 dB, typical)
- 5 MHz to 20 MHz: ±0.3 dB (±0.02 dB, typical)

**Harmonic distortion (1 V<sub>pp</sub>)**
- 10 Hz to 20 kHz: <-70 dBc (<-77 dBc, typical)
- 20 kHz to 1 MHz: <-60 dBc (<-72 dBc, typical)
- 1 MHz to 10 MHz: <-50 dBc (<-55 dBc, typical)
- 10 MHz to 20 MHz: <-40 dBc (<-55 dBc, typical)
- THD: <0.2% (<0.15%, typical) 10 Hz to 20 kHz, 1 V<sub>pp</sub>

**Spurious (1 V<sub>pp</sub>)**
- 10 Hz to 1 MHz: <-60 dBc (<-71 dBc, typical)
- 1 MHz to 20 MHz: <-50 dBc (<-68 dBc, typical)

**Phase noise, typical**
- 20 MHz: <-110 dBc/Hz at 10 kHz offset, 1 V<sub>pp</sub>

**Residual clock noise**
- -63 dBm

**Square wave**
- 1 μHz to 10 MHz

**Rise/fall time**
- ≤18 ns

**Jitter (RMS)**
- <500 ps (<60 ps, typical)

**Ramp wave**
- 1 μHz to 200 kHz

**Linearity**
- ≤0.1% of peak output at 10% to 90% of amplitude range

**Symmetry**
- 0.0% to 100.0%

**Pulse wave**
- 1 mHz to 10 MHz

**Pulse width**
- 30.00 ns to 999.99 s

**-- Resolution**
- 10 ps or 5 digits

**Pulse duty**
- 0.001% to 99.999% (Limitations of pulse duty width apply)

**Edge transition time**
- 18 ns to 0.625 × Pulse Period

**-- Resolution**
- 10 ps or 4 digits

---

1 The given typical values are not warranted. But 80% or more manufactured units will perform to the level indicated at room temperature (approximately 25 °C).
## General characteristics

**Lead delay**
- **Range**
  - Continuous Mode: 0 ps to Period Trigger/Gate Burst Mode: 0 ps to Period – \[\text{Pulse Width} + 0.8 \times (\text{Leading Edge Time} + \text{Trailing Edge Time})\]
- **Resolution**
  - 10 ps or 8 digits
- **Overshoot**
  - <5%, typical
- **Jitter (RMS)**
  - <500 ps (<90 ps, typical)

**Other waveforms**
- 1 μHz to 200 kHz

**Noise bandwidth (-3 dB)**
- 20 MHz
  - **Noise type**
    - White Gaussian

**DC (into 50 Ω)**
- –5 V to +5 V

**Arbitrary waveforms**
- 1 mHz to 10 MHz
  - **Arbitrary waveforms in Burst Mode**
    - 1 mHz to 5 MHz
  - **Effective analog bandwidth**
    - 34 MHz
  - **Nonvolatile memory**
    - 4 waveforms
  - **Memory: sample rate**
    - 2 to 128 k: 250 MS/s
  - **Vertical resolution**
    - 14 bits
  - **Rise/fall time**
    - ≤20 ns
  - **Jitter (RMS)**
    - 4 ns

**Amplitude**
- **Range**
  - 50 Ω load: 1 mV_p-p to 10 V_p-p
  - Open circuit: 2 mV_p-p to 20 V_p-p
- **Accuracy**
  - ±(1% of setting + 1 mV, (1 kHz sine waveform, 0 V offset, >10 mV_p-p amplitude)
- **Resolution**
  - 0.1 mV_p-p, 0.1 mV rms, 1 mV, 0.1 dBm, or 4 digits
- **Units**
  - V_p-p, V rms, dBm (sine wave only)

**Output impedance**
- 50 Ω

**Load impedance setting**
- Selectable: 50 Ω, 1 Ω to 10.0 kΩ, high Z (adjusts displayed amplitude according to selected load impedance)

**Isolation**
- <42 V_peak maximum to earth

**Short-circuit protection**
- Signal outputs are robust against permanent shorts against floating ground

**External voltage protection**
- To protect signal outputs against external voltages use fuse adapter 013-0345-00

**DC offset**
- **Range**
  - 50 Ω load: ±(5 V_peak – amplitude V_p-p/2)
  - Open circuit: ±(10 V_peak – amplitude V_p-p/2)
- **Accuracy**
  - ±(1% of |setting| + 5 mV + 0.5% of amplitude (V_p-p))
- **Resolution**
  - 1 mV
### Modulation characteristics

### Auxiliary input characteristics

**Modulation input**
- **Input range**: All except FSK: ±1 V full scale
  - FSK: 3.3 V logic level
- **Impedance**: 10 kΩ
- **Frequency range**: DC to 25 kHz (122 kS/s sample rate)

**External triggered/gated burst input**
- **Level**: TTL compatible
- **Pulse width**: 100 ns minimum
- **Slope**: Positive/negative selectable
- **Trigger delay**: 0.0 ns to 85.000 s
- **Resolution**: 100 ps or 5 digits
- **Jitter (RMS), typical**: Burst: <500 ps (Trigger input to signal output)

**10 MHz reference input**
- **Impedance**: 1 kΩ, AC coupled
- **Required input voltage swing**: 100 mV\(\text{p-p}\) to 5 V\(\text{p-p}\)
- **Lock range**: 10 MHz ±35 kHz

### Auxiliary output characteristics

**Trigger output**
- **Level**: Positive TTL level pulse into 1 kΩ
- **Impedance**: 50 Ω
- **Jitter (RMS), typical**: 500 ps
- **Max frequency**: 4.9 MHz (4.9 MHz to 20 MHz: A fraction of the frequency is output)

### Common characteristics

**Remote programming** (GPIB, LAN 10BASE-T/100BASE-TX, USB 1.1, compatible with SCPI-1999.0 and IEEE 488-2 standards)

Opt. C5  Calibration Service 5 Years
Opt. D1  Calibration Data Report
Opt. D3  Calibration Data Report 3 Years (with Opt. C3)
Opt. D5  Calibration Data Report 5 Years (with Opt. C5)
Opt. R5  Repair Service 5 Years (including warranty)
Opt. R5DW Repair Service Coverage 5 Years (includes product warranty period). 5-year period starts at time of instrument purchase

Accessories

Recommended accessories

RMU2U  Rackmount kit
013-0345-00  Fuse adapter, BNC-P to BNC-R
159-0454-00  Fuse set, 3 pcs, 0.125 A
012-0482-00  BNC cable shielded, 3 ft.
012-1256-00  BNC cable shielded, 9 ft.
012-0991-00  GPIB cable, double shielded
011-0049-02  50 Ω BNC terminator

Warranty

Three-year warranty on parts and labor.

Tektronix is registered to ISO 9001 and ISO 14001 by SRI Quality System Registrar.
